

MARKETS AND WEATHER FEED NOTICE FROM AGRICHARTS

In the last couple weeks there has been a lot going on in the web world. A couple of these changes from browser and software companies have caused issues for individual users.

Here are a few of the issues along with routes to counteract the changes:

Microsoft released Internet Explorer (IE) 9. This is a great browser but Microsoft forgot some key Java components with the update.

If you update to IE 9 and notice that you are unable to perform items in the admin follow these steps:

1. Visit www.java.com
2. Upload free Java Update
3. Close Browser
4. Re-open

For Microsoft Internet Explore 7, 8 & 9: If you are running AVG Antivirus Security and notice that the pop-up windows in the admin are not properly showing, you will need to open AVG Center and disable the "LinkScanner."

If these items do not work on your machine visit

<http://www.mozilla.com/en-US/firefox/new/>

and download the latest version of FireFox for your browser. This system will allow for items to work correctly with not only our systems but many other websites until Microsoft releases an update for its browsers.
